

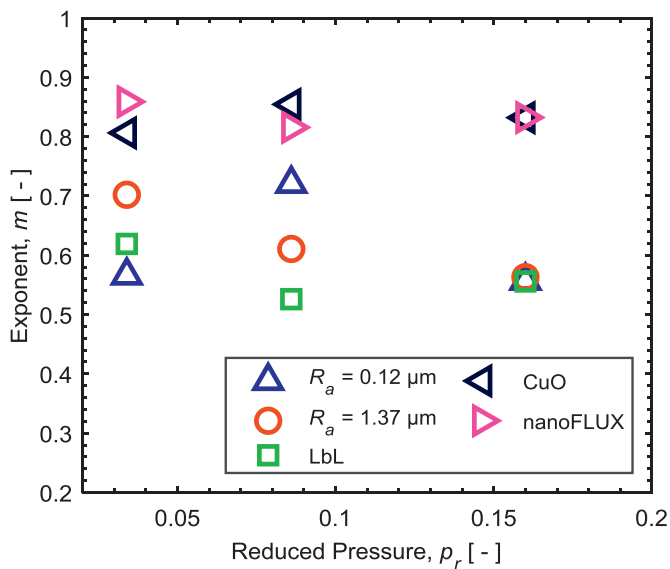

Fig. 6. Fitted exponent, m , as a function of the reduced pressure.

Table 2

Nucleation site density of surface for 20 kW/m².

Surface	Nucleation site density [sites/ μm^2]
Polished	1.4×10^4
Roughened	6.9×10^4
LbL	1.7×10^4
CuO	8.0×10^4
nanoFLUX	2.8×10^4

4.2. Nucleation site density

Images from a high-speed camera are used to illustrate the difference in nucleation site density between the surfaces shown in Fig. 8, while the nucleation site density data for the videos are listed in Table 2.

The roughened surface has a higher nucleation site density than that of the polished surface, with a 20% greater nucleation site density than the polished surface.
