

$t = 0 \text{ s}$

$t = 0.02 \text{ s}$

$t = 0.04 \text{ s}$

$t = 0.06 \text{ s}$

Average bubble departure diameter: 2.80 mm

(b) Femtosecond laser processed 1 $Sa = 0.38 \mu\text{m}$

$t = 0 \text{ s}$

$t = 0.02 \text{ s}$

$t = 0.04 \text{ s}$

$t = 0.06 \text{ s}$

Average bubble departure diameter: 2.27 mm

(c) Sandpaper polished 120 grit $Sa = 0.83 \mu\text{m}$

$t = 0 \text{ s}$

$t = 0.02 \text{ s}$

$t = 0.04 \text{ s}$

$t = 0.06 \text{ s}$

Average bubble departure diameter: 1.82 mm

Fig. 10. A simple case in evaluating bubble departure diameter and bubble departure frequency. Please also see the supplementary animation.
