

Table 1
Boiling heat transfer enhancement versus the polished surface by addition of millimeter-sized spherical free particles in the heat flux range of 20–100 kW/m².

Particle size (number)	Nucleate boiling enhancement (%)
3 mm (50 EA) and 6 mm (15 EA)	115
3 mm (100 EA)	105
6 mm (25 EA)	99
9 mm (9 EA)	61
13 mm (4EA)	79
