

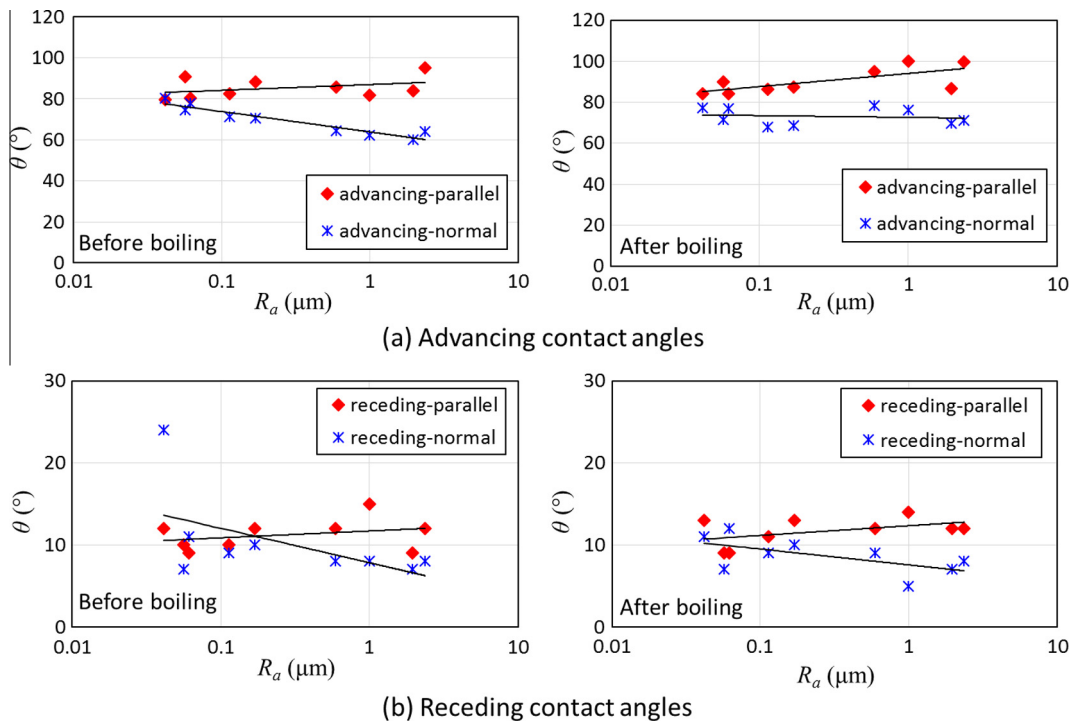

Fig. 7. Advancing and receding contact angles with R_a for two different directions.

Eq. (3) is the Rohsenow correlation for water, where a is reported as 0.33 [2]. Converting Eq. (3) into a dimensionless form

$$\frac{1}{C_{ef}} = f(R_a) = A \left(\frac{R_a}{R_{a0}} \right)^m \quad (5)$$
